

Chemical Peels: B-LIFTx

Beta-LIFTx® (Beta-LIFTx®) is a breakthrough scientific discovery that works wonders on your skin. A remarkable dermatological procedure, B-LIFTx is redefining the traditional superficial peel. This advanced skin renewal treatment features the popular beta hydroxyacid and is offered only by your dermatologist. It takes just five minutes, but its visible results appear to lift years off your face.

B-LIFTx is a new science. It is an innovative formulation of beta hydroxyacid created by Douglas Kligman M.D., Ph.D., and Albert Kligman M.D., Ph.D., the inventor of Retin-A. The B-LIFTx action is enhanced by an important technological advancement, the MICROSPONGE (2). This technology allows B-LIFTx to reach into and affect even fine lines and tiny surface imperfections.

Special Beta-LIFTx® benefits

Beta-LIFTx® lifts dead, dull cells off the surface of your skin. The procedure stimulates a "burst of renewal" within your skin to bring healthy, young, living cells to the surface. Beta-LIFTx® is also able to penetrate skin follicles -- making Beta-LIFTx® a well-suited chemical peel for conditions such as acne, acne-rosacea, and enlarged pores.

Visible results

- Fine lines and wrinkles become less apparent
- Skin tone evens out
- Texture becomes more refined
- Oily or acne-prone skin is improved
- Enlarged pores may appear smaller
- Superficial scars appear reduced
- Skin appears healthier and more youthful

No "downtime"

With Beta-LIFTx®, there is no downtime. Your skin immediately looks and feels smoother and tighter. Your face may temporarily appear a bit rosy. In a day or two, your face may begin peeling. The degree of peeling can vary from invisible, to mild, to noticeable peeling and flaking.

Why Beta-LIFTx® is better

Unlike traditional chemical peels, Beta-LIFTx® automatically stops after it has delivered all of its renewing stimulus. This makes Beta-LIFTx® exceptionally safe. B-LIFTx is also highly effective. Research has shown that just one B-LIFTx procedure will do more for your skin than numerous traditional, superficial chemical peels.

Nothing else works to improve your skin so well and in so many ways in just minutes.

Treat yourself to new skin, beginning with B-LIFTx.

Beta-LIFTx® skin care tips

Sun protection with a broad, spectrum sunscreen product of at least 15 SPF, but preferably a 30 SPF is a daily must following your Beta-LIFTx® treatment.

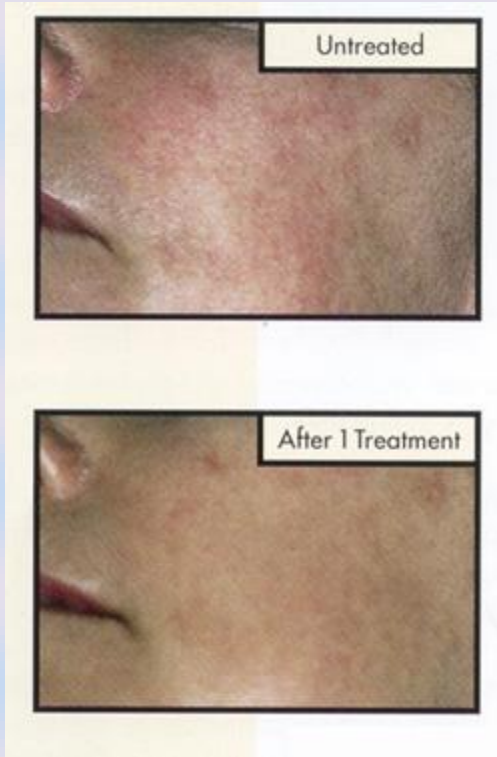

Gently cleanse your face twice daily.

Avoid removing flakes with your fingers.

Your emerging beautiful skin should be treated gently. Avoid products or treatments that can be irritating such as granular scrubs or masks that must be pulled or rolled off for at least one week.

Wait at least one week after your Beta-LIFTx® treatment to have a facial or professional cleansing treatment.
